ABOUT VERISIGN Verisign enables the security, stability, and resiliency of key internet infrastructure and services, including providing root zone maintainer services, operating two of the 13 global internet root servers, and providing registration services and authoritative resolution for the .com and .net top-level domains, which support the majority of global e-commerce. To learn more about what it means to be Powered by Verisign, please visit verisign.com.

¹ All figures exclude domain names in the .tk, .cf, .ga, .gp, and .ml ccTLDs. Quarterly and year-over-year trends have been calculated relative to historical figures that have also been adjusted to include these five ccTLDs. For further information, please see the Editor's Note contained in V4.18 Issue 1 of *The Domain Name Industry Brief*.
² The generic, TLD, gTLD, and ccTLD data cited in the brief (i) includes ccTLD internationalized domain names, (ii) is an estimate as of the time the brief was developed and (iii) is subject to change as more complete data is received. Some numbers in the brief may reflect rounded rounding.
³ Line break indicates that the .com line has been shortened for display considerations.
⁴ The domain name base is the active zone plus the number of domain names that are registered but not configured for use in the respective TLD zone file plus the number of domain names that are in a client or server hold status. The .com and .net domain name registration figures are as reported in Verisign's most recent SEC filings.
